

NATIONAL LIBRARY OF MEDICINE

CLASSIFICATION

A scheme for the shelf arrangement
of books in the field of medicine
and its related sciences

Washington, D. C.

1956

For sale by the Superintendent of Documents, U. S. Government Printing Office
Washington 25, D. C. - Price \$2.00 (Paper cover)

First edition 1951

Second edition 1956

Second edition prepared by the
Armed Forces Medical Library.

During the course of publication, the
name of the Library was changed to
National Library of Medicine.

PREFACE

The Second Edition of the Armed Forces Medical Library Classification has resulted from a thorough revision designed to effect further simplification of the tables, to make provision for new concepts and developments and to incorporate in the body of the work the four change lists which have been issued at yearly intervals since the first edition appeared.

In this second edition, as in the first, we have focused our attention on providing a shelf classification for medical books, rather than on a classification of medicine.

The revision has been prepared under the supervision of Miss Winifred A. Johnson, Head of the Cataloging Section, with Mrs. Justine Randers-Pehrson responsible for the schedules, Mrs. Stella F. Schehl compiling the index, and Mrs. Martha Hedetniemi typing the manuscript.

M. RUTH MacDONALD
Assistant Librarian for
Cataloging

INTRODUCTION

In introducing this new edition, it seems desirable to present information which may be helpful in the application of the schedules, as well as general observations on the salient features of the present revision.

The Classification covers the field of medicine and its related sciences. The various schedules of the Library of Congress Classification are used with it to provide for subjects bordering on medicine and for non-medical reference material. However, only selected numbers from the various classes are used, in most cases. Therefore, in the index to this volume, class letters only have been given to indicate the use of LC numbers, in order to assure flexibility and to enable each library to determine the degree of specificity it desires.

The Armed Forces Medical Library applies subject classification to monographs only. Serial publications are separated by form and are assigned call numbers within several broad categories. For details, see page xv.

The headings for the main tables (e.g., Musculoskeletal System) are given in brief form and are to be interpreted broadly as encompassing the physiological system, the specialty or specialties connected with it, the regions of the body chiefly concerned, and subordinate related fields. Within the tables, division by organ usually has priority. A work on a particular disease is classified with the disease, which in turn is classified with the organ or region chiefly affected, regardless of special emphasis on diet, drug, or other specific form of therapy.

Under each main table (as well as in other occasional

sections, e.g., WO 201-) the numbers 1-32 have been uniformly assigned, with minor deviations dictated by the nature of the material. Not all numbers are listed under every table; any now omitted may be interpolated as required.

Classes in the AFML schedules are divided geographically by the application of "Table G" (page xvii). The use of geographical breakdown is somewhat restricted, and each class so divided is marked (Table G) in the schedules.

Mention must be made of two types of monographic publications which are classified according to special plans: bibliography, and nineteenth century titles.

Bibliography. A bibliography of a subject within the scope of the AFML Classification takes the class number for the subject prefixed by a capital Z. For example, a bibliography on the history of surgery will have the classification ZWO 11.

Bibliographies which fall outside the scope of the AFML Classification will ordinarily be classed in schedule Z (Bibliography) of the LC Classification.

Bibliographies of serials are classified in ZW 1. (cf. footnote, page xix)

Nineteenth Century Titles. A simplified subject classification derived from the complete schedules has been devised for nineteenth century (1801-1913) monographs. This abbreviated classification (pages 221-31) is limited to combinations of letters with certain exceptions: W1-6, W 600, the entire WZ schedule and the form number 22, Directories. Another exception concerns nineteenth century bibliography which is to be classified in accordance with principles stated in the paragraphs above.

The following notes, pertaining to individual schedules,

may be helpful in using the tables.

QS Human Anatomy. This schedule is used to classify general anatomy and comparative anatomy of man and animals. Anatomy of animals alone goes into LC schedule QL. Anatomy of an organ or region of the human body is classified with other material on the organ or region (e.g., a book on the anatomy of the heart classifies in WG 201).

QT Physiology. This schedule is used according to the plan stated for QS, and is supplemented as needed by the LC schedule QP. The latter portions of QT cover broad areas in the field of hygiene.

QV Pharmacology. This table is used for the classification of books on individual drugs, written from the standpoint of therapeutics or of pharmacology. If, however, the title deals with the use of a specific drug in the treatment of a particular disease, it classes with the disease. Books on drug therapy in general are classified in WB 300.

All drugs are classified in QV except vitamins, QU; endocrine preparations (including synthetic substitutes) WJ, WK or WP; and non-endocrine biologicals, QW. The classification of drugs exemplified in Goodman and Gilman, The Pharmacological Basis of Therapeutics is useful in applying schedule QV.

The section beginning with QV 700 is used for classifying books dealing with the general aspects of pharmacy and pharmaceuticals, as contrasted with pharmacodynamics.

QW Bacteriology and Immunology. Books written on a particular species of bacteria are classed with the order to which that species belongs, according to the classification in Bergey's Manual of Determinative Bacteriology. Immunological characteristics of particular bacteria class with the bacteria.

QX Parasitology. Craig and Faust's Clinical Parasitology is helpful in resolving questions of classification in this area.

QY Clinical Pathology. A more descriptive title for this table might be Clinical Diagnosis by Laboratory Methods.

QZ Pathology. This schedule is a good example of the fact that the designation of the QS-QZ portion of the AFML Classification as covering the "pre-clinical sciences" is not entirely accurate, as this schedule covers all of the material on neoplasms in general (QZ 200-380).

The classification of books on neoplasms is often difficult. In some instances, a concept has been assigned a number in the QZ table and also elsewhere in the schedules (e.g., Leukemia, QZ 350 and WH 250). In such cases, classification must be made on the basis of emphasis within the book. Those titles which place emphasis on changes in structure will take the QZ number; those which emphasize disturbances of function, symptomatology, and treatment will take the clinical schedule number. In this connection, it is helpful to remember that the part of table QZ which deals with tumors is developed on the basis of tissues; elsewhere in the schedules the breakdown is usually on the basis of organs.

The Library has adopted the Manual of Tumor Nomenclature and Coding, issued in 1951 by the American Cancer Society, as its standard for classification and terminology. Neoplasms are not for the most part listed in the index under their specific names, since such indexing would be a duplication of the detailed index in the Manual.

WA Public Health. In the first edition, the statement was made that works having a non-medical emphasis such as economics or engineering were to be classed according to the LC schedules. It has been found advisable to abandon this practice for topics under civil engineering (water purification,

sewage, waste and refuse disposal) which concern the medical library only in their public health aspects. Note that the policy of using LC schedules still applies in other fields: child labor classifies in HD; food processing in TX.

WB Practice of Medicine. The section beginning WB 900 provides for the classification of works on special systems of therapeutics. It is to be noted that while a book on chiropractic in general is classed in WB 905, a book which deals specifically with the chiropractic regimen in scarlet fever would classify in WC 214.

WC Infectious Diseases. The principle on which this table is based is that of etiological agent, rather than physiological system, the principle which underlies most of the rest of the schedules. All major systemic infections are to be found in this schedule, with the exception of Tuberculosis, which is in WF, Respiratory Diseases. A few infectious diseases, usually local in character with no systemic involvement, are classed with the part affected (e.g., Impetigo is classed in Dermatology, WR 225).

Some arbitrary arrangements have been made in table WC; the grouping of the venereal diseases; the coupling of bacterial and virus pneumonias; and bringing together bacillary and amebic dysentery. If no specific class is found for a relatively obscure disease such as pseudo glanders, such material may be classed on the basis of likeness (i.e., in this case, with glanders).

WD Deficiency Diseases. Diseases of Metabolism, etc. The WD block consists of a series of small tables which deal with various concepts which cut across the main axes selected for the framework of the Classification.

WS Pediatrics. The basis of the table is age group, rather than physiological system, which raises obvious questions such

as, should pediatric gynecology be classed with pediatrics or with gynecology? An arbitrary decision has been made: material on the various body systems in children is classed in the WS table; pediatric works dealing with something other than body systems per se are classed outside of WS (e.g., a book on surgery in children would be classed in WO 925). It should also be noted that while a book dealing with respiratory ailments of childhood would class in WS 280, a book on pneumonia in infants would class with pneumonia, WC 202.

WY Nursing. The class numbers for nursing in special fields of medicine (WY 151-163) are also applied to textbooks in the special fields which are written for nurses (e.g., surgery for nurses, WY 161; surgical nursing, WY 161). In the "pre-clinical" sciences, special texts for nurses class with other general texts (e.g., bacteriology for nurses, QW 4).

WZ History of Medicine. This schedule contains no subject breakdowns as the history of each medical and clinical subject is classed with each subject, under the form number 11. Examples: WO 11, History of Surgery; WW 11, History of Ophthalmology and/or Optometry.

A fundamental feature of the entire classification scheme for the Armed Forces Medical Library is embodied in the classes WZ 220-290 which provide for the arrangement of early material in century groups, according to date of imprint. Within each class, the individual titles are arranged alphabetically by author. With the nineteenth century monographs arranged according to a special scheme, the total effect is a grouping by centuries, with the detailed subject classification schedules applying only to titles issued since 1914.

Notes on the Present Revision. Comparison of the first and second editions of the Classification will reveal the following types of changes.

Where practice has shown excessive subdivision of classes, subdivisions have been eliminated (example: all diseases of the pituitary gland, except neoplasms, are now included in the single class WK 550, whereas formerly five subclasses were used).

In certain cases additional classes have been provided to group material which cuts across several fields (examples: a new section, Thorax and Thoracic Surgery, has been established as WF 970-975; classes for chronic disease have been added to the WT schedule).

Some classes have been redefined and enlarged to include concepts not previously covered (examples: WD 222, formerly Disturbances of Acid-base Balance, now becomes Disturbances of Water, Electrolyte, and Acid-base Balances; WR 350, originally limited to Cutaneous Leishmaniasis, has now been broadened to include Tropical Skin Diseases in general).

New concepts have been introduced (examples: Collagen Diseases, Ultrasound Therapy, Mass Chest X-ray). Some of these new topics have been classified somewhat arbitrarily (example: Carotid Sinus and Carotid Sinus Syndrome have been placed in WK 375 with Carotid Body). This exemplifies the conviction of the compilers that primary emphasis in these schedules must be placed on providing a practical order for the shelf arrangement of books, rather than on an ideal system of knowledge.

Terminology has been modernized (example: "Neurasthenia" has been dropped in favor of "Somatization Syndromes").

The use of certain form numbers has been rationalized (example: W 3 is now used for all congresses, regardless of subject, and the form number 3 has been eliminated from all other portions of the Classification).

Numerous explanatory notes have been added in the belief that catalogers will find them helpful (example: WM 30-49). "Compare" notes have been generously supplied for the same reason.

Because certain classes have been shifted, because some concepts have been altered and enlarged, because a few subdivisions have been eliminated, some reclassification will be entailed in the change-over from the first to the second edition. We do not believe, however, that the amount of such reclassification should be extensive, and we are convinced that in the long run the changes will prove their worth.

CLASSIFICATION OF SERIAL PUBLICATIONS

Serial publications are those which are issued in successive parts and are intended to be continued indefinitely (e.g., periodicals, journals, transactions, annuals, numbered series, and other continuations). They are classified according to type of publications in five categories.*

Category 1. Serials of medical importance, including hospital publications which are predominantly clinical, and governmental publications which resemble magazines rather than official documents. These serials are usually indexed in medical and scientific indexes. Classification: W 1.

Category 2. Non-medical serials which are classified according to the LC Classification.

Category 3. Serial publications of medical congresses, whether local, national, or international in scope. Classification: W 3.

Category 4. Serial publications of hospitals (except clinical material) regardless of private or public sponsorship. Classification: WX 2.

Category 5. Medical serial publications of governments, except those which are preferred in Category 1. Classification: W 2.

* Exception: Serial publications which are indexes or bibliographies (e.g., Cancer Current Literature and Tuberculosis Index) are classified in the bibliography number for the subject covered.

SERIAL NUMBERING

The Armed Forces Medical Library uses a special scheme of numbering to insure the alphabetical arrangement of the large number of serials contained in categories 1 (W 1) and 3 (W 3). Under this scheme the first two letters of the main entry are used followed by two or more numbers according to the number of entries to be numbered. Examples:

W 1 RE359	Revista comercial farmacéutica
W 1 RE3594	Revista cubana de gastroenterología
W 1 RE743	Revue belge de pathologie
W 1 RU76	Russia (U. S. S. R.) Armia. Trudy
W 3 AL545	All-India Pharmaceutical Conference
W 3 CO263	Congrès français de stomatologie

TABLE G

Purpose. The principal use of Table G is in the arranging of serial publications of governments, which take the form class W 2; and hospital publications, which take the form class WX 2. Use of Table G permits a shelving order which is controlled both geographically and alphabetically.

Table G is also used, on a somewhat restricted basis, for geographic grouping of monographs.

General Explanation. Table G is a modified Cutter pattern, adapted for special purposes. It divides the world into ten regions to each of which an identifying letter is assigned:

A - United States	G - Europe	K - Australia
D - America	H - Africa	L - Pacific Islands
F - Great Britain	J - Asia	M - International
P - Polar Regions		

Additional numbers may be interpolated into Table G as needed. Variants of place names do not require a change in Table G numbering (e.g., JT3 Siam or Thailand).

Countries and regions, other than the United States, are provided with numerical designation on the basis of medical as well as geographical and political considerations. This means that Table G, in addition to its main purpose, makes provision for geographical groupings which cannot be used to indicate source of material, publishing agency, or authorship (e.g., GA1 - Europe; DA2 - North America).

United States Numbers. Because of the multiplicity of United States federal, state, and local documents, special provision has been made for their arrangement.

The various sections of the U. S. Federal Government, with the exception of the Armed Forces, take the designation "A".

The Armed Forces take the following designations:

- A1 - Department of Defense
- A2 - Department of the Army (War Department, excluding Air Corps)
- A3 - Army Air Forces (to 1947)
- A4 - Department of the Air Force
- A5 - Department of the Navy

AA1 is the designation for the geographical area of the U. S. as a whole, or for any region of the U. S. which does not conform to, or come within the boundaries of, a single state or territory. Each state has been provided with a separate number, as have Alaska and Hawaii.

New York City has a separate number assigned to it (AN7). This has been done in order to adequately differentiate it from New York State (AN6) and to provide a simple notation for this entity because of its size and consequent prolific publications.

Subordinate Political Units. Each country number may be modified to form a county (province, prefecture, state) or a city number by the addition of .1 (county) and .2 (city).
Examples:

FE5	- England	DC2	- Canada
FE5.1Y6	- Yorkshire	DC2.1B7	- British Columbia
FE5.2L6	- London	DC2.2T6	- Toronto

In the United States it is the individual state number which is so modified. Examples: AT4 - Texas
AT4.2F6 - Fort Worth

Application to Serial Documents. Examples to illustrate the application of Table G to serial documents (W 2):

United States

W 2	U. S. Army. Air Corps. Matériel
A3	Division
M4te	Air Corps technical report
W 2	Connecticut. Commission on Alcoholism
AC8	Annual report
C7a	

Foreign

W 2	Gt. Brit. General Register Office
FA1	The Registrar General's quarterly
G3re	return...

W 2	Saskatchewan. Dept. of Public Health
DC2.1	Annual report
S2D3a	

Application to Hospital Serials. Hospital serial reports (WX2) are cuttered to arrange the titles geographically within the class and to identify each hospital. Decimal subdivisions .1 and .2 for subordinate political divisions are not used but a notation is added to represent the city. Examples:

Civilian hospitals

WX	Los Angeles. Cedars of Lebanon Hospital
2	Annual report
AC2	
L6C3a	

WX Sharon, Conn. Hospital
2 Annual report
AC8
S5H8a

WX Bergen, Norway. Kvinneklínikken
2 Årsberetning
GN6
B5K9a

Civilian hospitals bearing the names of saints

WX Reading, Pa. St. Joseph's Hospital
2 Annual report
AP4
R2SJ8a

WX White Plains, N. Y. St. Agnes Hospital
2 Annual report
AN6
W5SA2a

U. S. military hospitals. Named hospitals have fixed locations and are cuttered the same way as civilian hospitals except that the military symbol precedes the geographical notation. Numbered hospitals do not have fixed locations and geographical notation is not applied to them.

WX U. S. Army. Madigan Army Hospital,
2 Tacoma, Wash.
A2W2 Annual
M1a

WX U. S. Army. General Hospital No. 141
2 Year book
A2
141

Application to Monographs. Table G is used to express geographical groupings for subjects in the AFML Classification. When LC Classification numbers are used, the geographical breakdowns provided in the LC schedules are to be applied.

Table G is used for monographic titles on a broader basis than for serials. For example, a history of medicine limited to one city, or to one section of a country, takes the geographic notation for the country, except that the state designation is used for material limited to a U. S. city, county or state.

BY COUNTRY

300 Nursing by country (Table G)

1. The first part of the paper is devoted to a general discussion of the problem.
2. In the second part, we consider the case of a single point.
3. In the third part, we consider the case of a line.
4. In the fourth part, we consider the case of a surface.
5. In the fifth part, we consider the case of a volume.
6. In the sixth part, we consider the case of a manifold.
7. In the seventh part, we consider the case of a metric space.
8. In the eighth part, we consider the case of a topological space.
9. In the ninth part, we consider the case of a vector space.
10. In the tenth part, we consider the case of a normed space.
11. In the eleventh part, we consider the case of a Banach space.
12. In the twelfth part, we consider the case of a Hilbert space.
13. In the thirteenth part, we consider the case of a separable space.
14. In the fourteenth part, we consider the case of a complete space.
15. In the fifteenth part, we consider the case of a compact space.
16. In the sixteenth part, we consider the case of a connected space.
17. In the seventeenth part, we consider the case of a path-connected space.
18. In the eighteenth part, we consider the case of a simply connected space.
19. In the nineteenth part, we consider the case of a contractible space.
20. In the twentieth part, we consider the case of a deformation retract.
21. In the twenty-first part, we consider the case of a homotopy equivalence.
22. In the twenty-second part, we consider the case of a homotopy group.
23. In the twenty-third part, we consider the case of a fundamental group.
24. In the twenty-fourth part, we consider the case of a higher homotopy group.
25. In the twenty-fifth part, we consider the case of a cohomology group.
26. In the twenty-sixth part, we consider the case of a de Rham cohomology.
27. In the twenty-seventh part, we consider the case of a singular cohomology.
28. In the twenty-eighth part, we consider the case of a Čech cohomology.
29. In the twenty-ninth part, we consider the case of a sheaf cohomology.
30. In the thirtieth part, we consider the case of a derived functor.
31. In the thirty-first part, we consider the case of a spectral sequence.
32. In the thirty-second part, we consider the case of a long exact sequence.
33. In the thirty-third part, we consider the case of a short exact sequence.
34. In the thirty-fourth part, we consider the case of a commutative diagram.
35. In the thirty-fifth part, we consider the case of a universal property.
36. In the thirty-sixth part, we consider the case of a natural transformation.
37. In the thirty-seventh part, we consider the case of an adjunction.
38. In the thirty-eighth part, we consider the case of a monad.
39. In the thirty-ninth part, we consider the case of a comonad.
40. In the fortieth part, we consider the case of a bimonad.
41. In the forty-first part, we consider the case of a braided monoidal category.
42. In the forty-second part, we consider the case of a symmetric monoidal category.
43. In the forty-third part, we consider the case of a tensor product.
44. In the forty-fourth part, we consider the case of a direct sum.
45. In the forty-fifth part, we consider the case of a direct product.
46. In the forty-sixth part, we consider the case of a direct limit.
47. In the forty-seventh part, we consider the case of an inverse limit.
48. In the forty-eighth part, we consider the case of a colimit.
49. In the forty-ninth part, we consider the case of a limit.
50. In the fiftieth part, we consider the case of a universal object.
